An Intelligent Support Environment to Improve the Quality of Decision Processes in Health Communities

WHAT

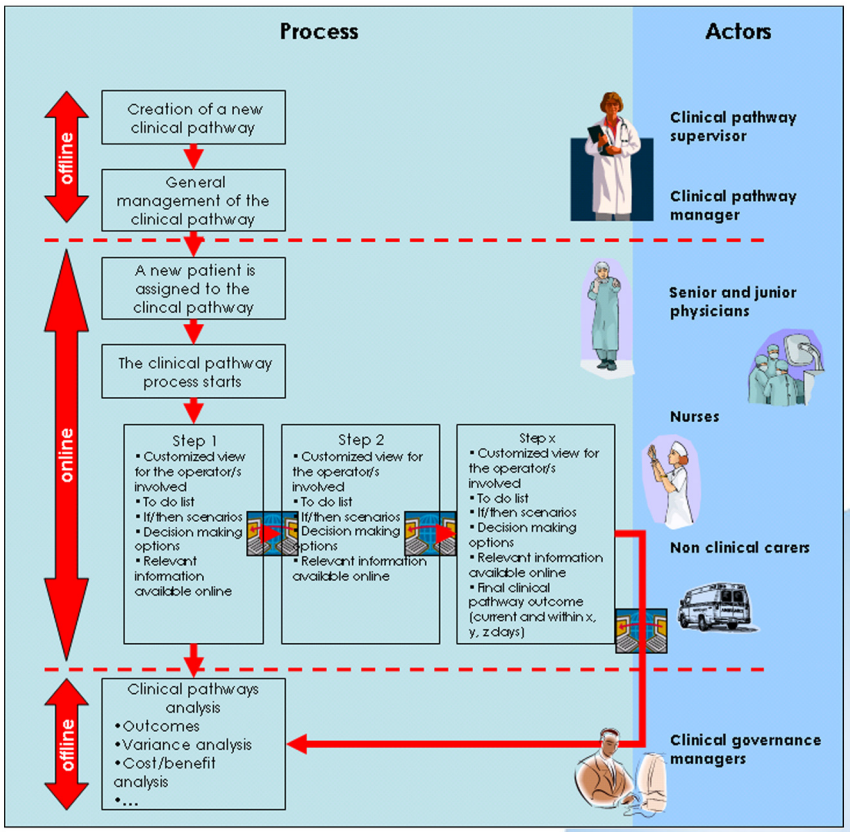
Decision Supporting System applied during the clinical practice.

HOW

The system offers all the necessary tools for the creation and design of clinical means for every type of pathology. The system allows the day-by-day monitorization of the predicted activities and the searching for the best practice when a deviation is detected .

WHO

The system is created and designed to be used by different actors involved in the application of one specific clinical mean: doctors, nurses, managers, quality responsible, reviewers, etc.



Co-financed project by the EU VI Framework Program
